

THERMOVAP ENGINEERING

Your Partner in Heat Transfer Technology

Company Overview

Thermovap Engineering provides specialized technical consulting in thermal systems including Multiple Effect Evaporators (MEE) with TVR/MVR technologies, Caustic Evaporators, Spray dryers, ATFD, FBD, SFD, Heat Exchangers, Food & Chemical Processing plants troubleshooting. We help industries improve performance, reliability, and energy efficiency through practical engineering solutions.

Core Capabilities

- Multiple Effect Evaporators design and optimization
- Spray dryer design, optimization, and troubleshooting
 - Heat exchanger thermal design and MOC selection
- Energy audits and performance improvement studies
- ZLDs/MEE bottleneck analysis and revamp planning
 - Material selection & scaling control solutions
 - Waste water analysis & ion balancing

Consulting Services

- Thermal design of MEE, ZLD, Industrial Dryers
 - Technical audits (on-site & remote)
- Performance calculations and feasibility studies
- Troubleshooting of low evaporation, scaling, choking, low steam economy, and corrosion issues

Industries Served

- Food & dairy
- Pharma and Textiles
- Chemical and process industries
- Effluent treatment and ZLD systems

Why Choose Us

- Strong field experience
- Practical, plant-focused solutions
- Fast turnaround for design and troubleshooting
- Cost-effective engineering support for OEMs and end users
